Akron Manual Valve Actuator PB-128804

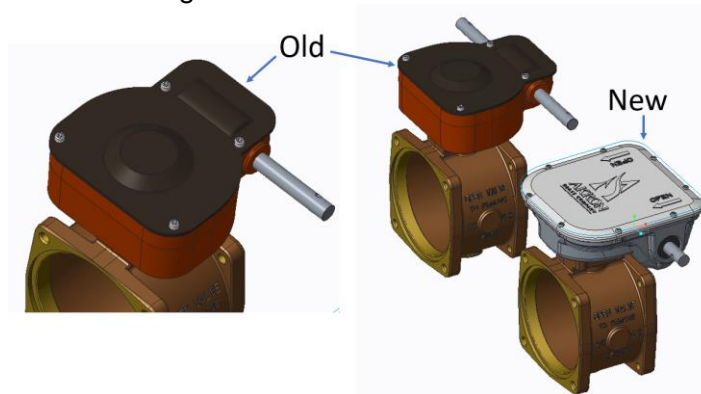

PRODUCT NAME: Manual Valve Actuator

STYLE NUMBER 8620, 8625, 8630, 8635

In July Akron transitioned to a new style of manual actuator. The new actuator allowed the manual valve actuator to match the new electric actuator.

The new actuator offers:

- New bearing for smoother operation
- Components offer a better watertight seal
- Dual shaft operation as standard
- Lower weight

ALTERNATIVE DETAILS

- Be aware the new ratio is 14:1 instead of 12:1 creating issues for ratio specific handwheels. The change in ratio does not cause any issues with Akron's position indicating handwheels.
- New dimensions of the handwheel shown on second page. Old style shown on left and new style on right.
